

# How to Use CloudBerry Explorer for S3 Freeware with CenturyLink Object Storage

## 1. Get the credentials to access CenturyLink Object Storage

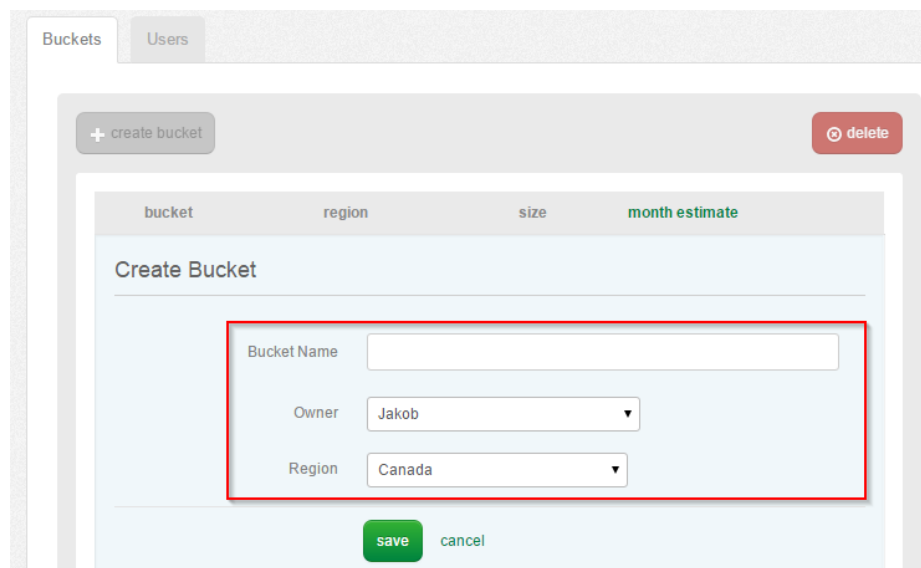

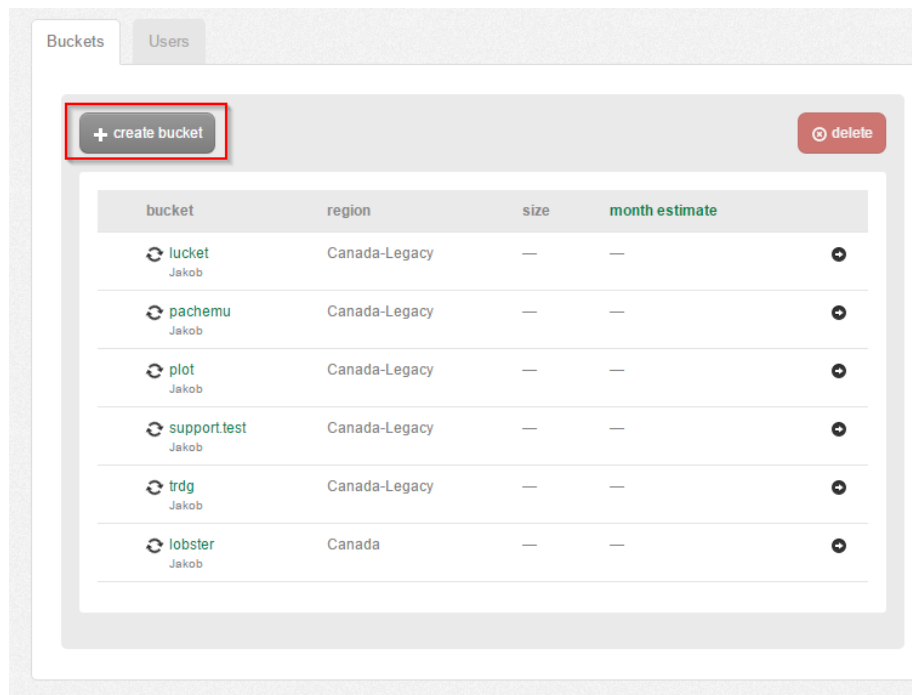

Go to <https://www.ctl.io> and login into your account.

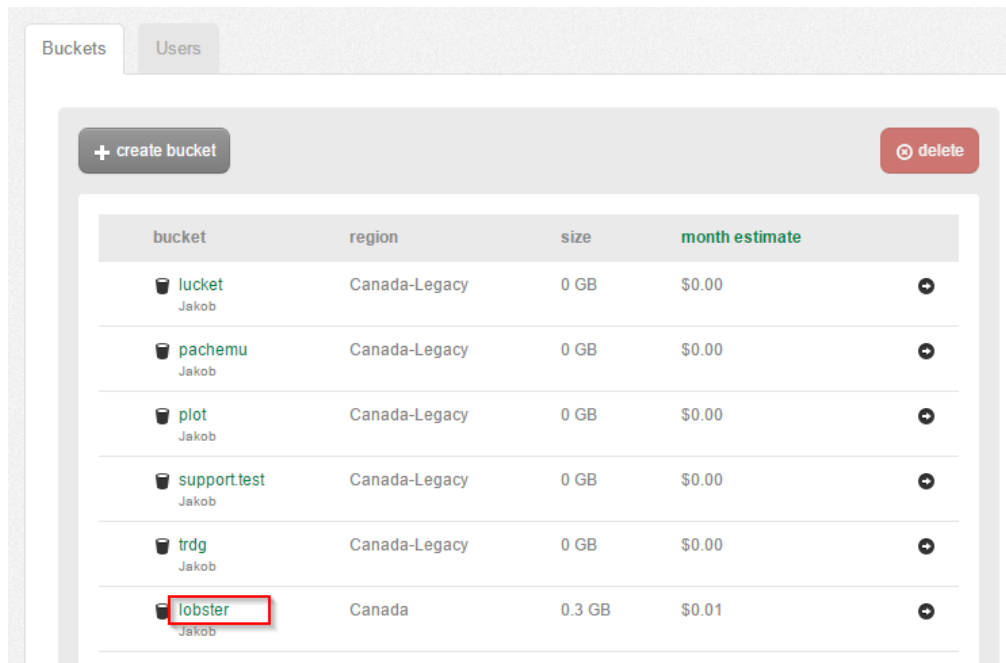

Then go to the top menu and click on **Object Storage**:

On the **Object Storage** page press **Create a bucket** and specify the bucket name (please, note, that you can create buckets in CenturyLink Object Storage only through web-interface; it is not allowed through third-party applications):

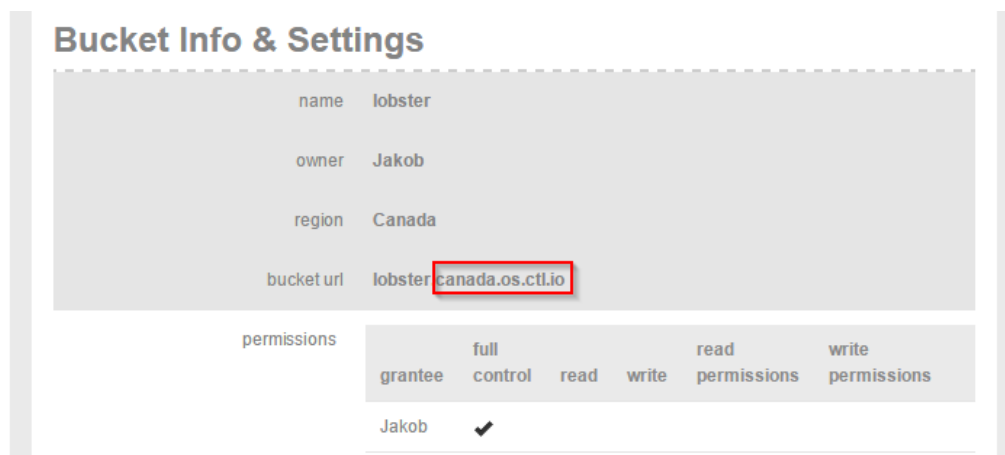

Then go inside the bucket to get the bucket end point URL:

bucket	region	size	month estimate
lucket Jakob	Canada-Legacy	0 GB	\$0.00
pachemu Jakob	Canada-Legacy	0 GB	\$0.00
plot Jakob	Canada-Legacy	0 GB	\$0.00
support.test Jakob	Canada-Legacy	0 GB	\$0.00
trdg Jakob	Canada-Legacy	0 GB	\$0.00
lobster Jakob	Canada	0.3 GB	\$0.01

Copy it to separate text file without bucket name:

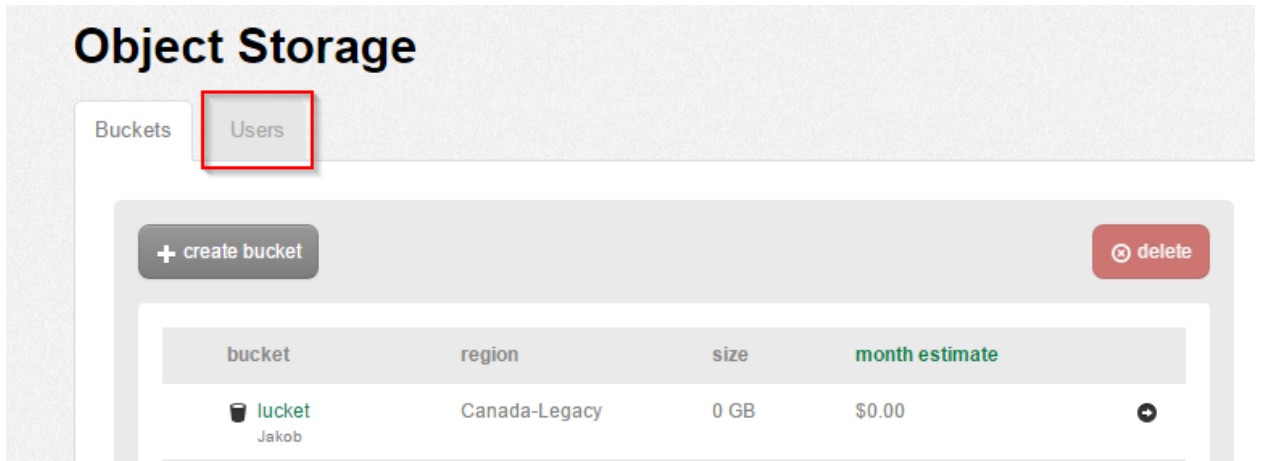

### Bucket Info & Settings

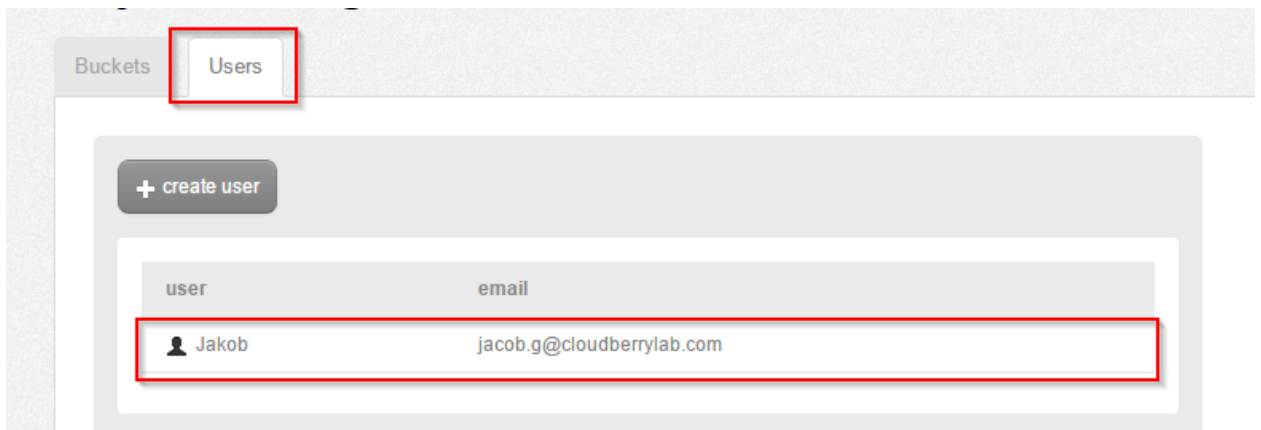

name	lobster
owner	Jakob
region	Canada
bucket url	lobster.canada.os.ctl.io

permissions	full control	read	write	read permissions	write permissions
grantee					
Jakob	✓				

Get back to the list of the buckets and click on the **Users** tab:

Choose one of the active users from the list:

Copy the **Access** and **Secret** key to a separate text file:

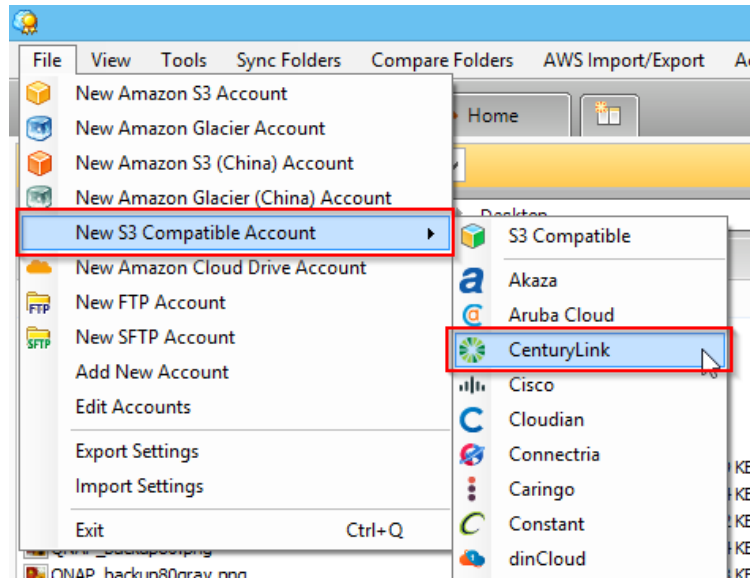

## 2. Download CloudBerry Explorer

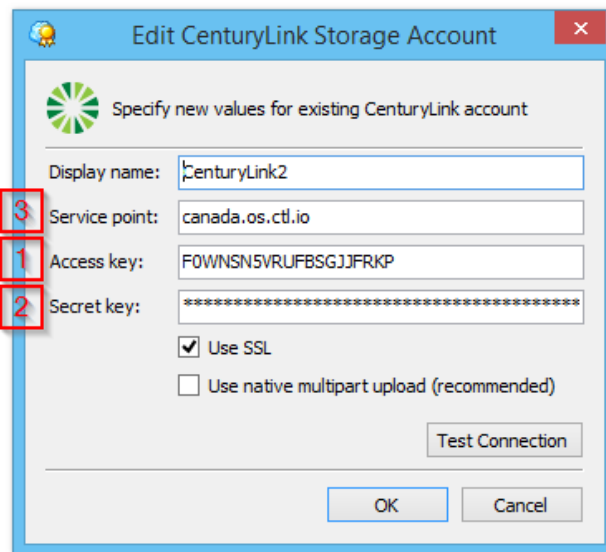

Download [CloudBerry Explorer for S3 Freeware](#). Install and launch the program.

### 3. Configure CloudBerry Explorer

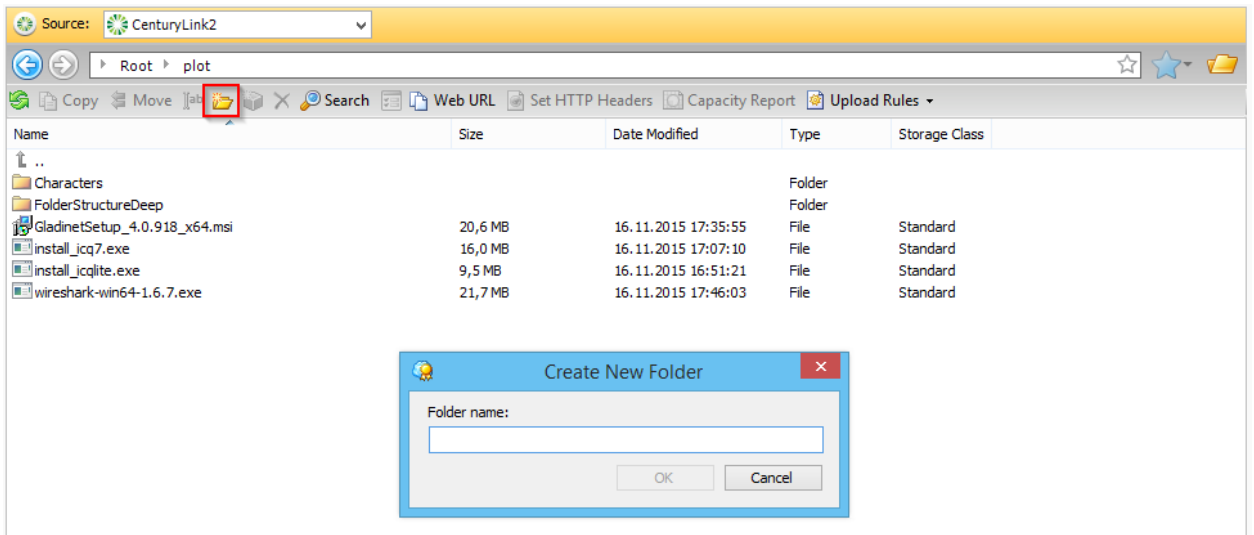

Start the program and select menu "File" > "New S3 Compatible Account" > "CenturyLink".

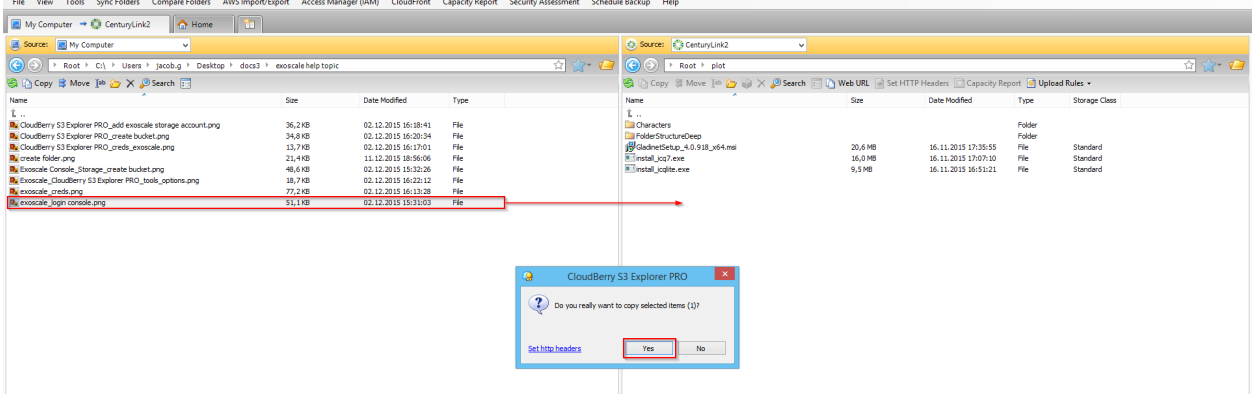

On the second step enter account credentials. Display name can be any. Access key, Secret key and Service point (End point), please, find on your credentials page we have described previously and paste to the appropriate fields:

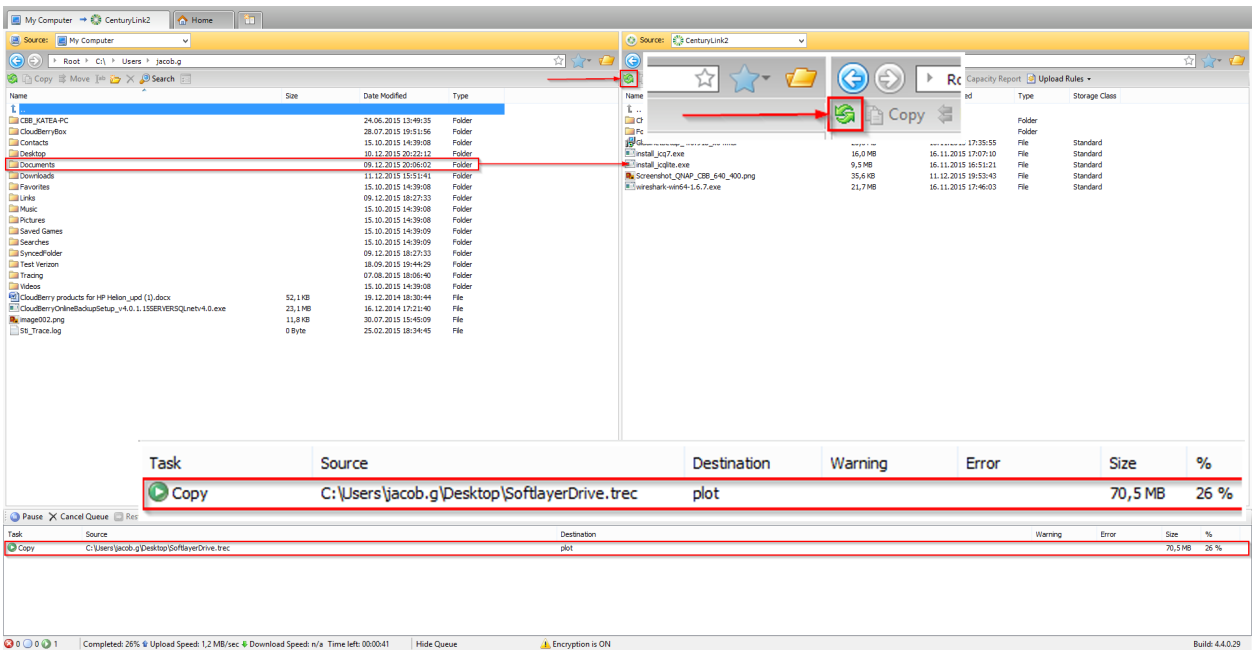

Press the button "Test connection" to check, if it was configured correctly. Now you can upload / download files to the buckets created earlier, organize files in folders inside buckets:

To upload or download file just drag and drop them from one part of the window to another:

Have a look at the task queue and upload progress indication at the bottom of the window. If you don't see the uploaded file in the bucket / folder, just press "Refresh":

If you need AES-256 bit encryption, compression or other advanced features, please, consider the upgrade to [Cloudberry Explorer for S3 PRO version](#).
